Your eyes are 4 times more sensitive to radiation than other parts of your body. Leaded eyewear are intended to be worn by persons who are present in the operating room during medical procedures requiring the use of fluoroscopy. They are intended protect the eyes of the operator from x-ray radiation.

EYEWEAR

QUALITY. SERVICE. INTEGRITY.

Proguard is one of the largest US-based leaded eyewear manufacturers in the world. Our licensed opticians handcraft each frame which are meticulously assembled and inspected with care.

Experience expert craftsmanship with our leaded glasses, goggles, fitovers, faceshields, and prescription eyewear available in a variety of brand name and affordable options.

WHO USES PROTECTIVE GLASSES?

Not too long ago, few doctors used leaded eyewear. With the increase in occurrences of early onset cataracts, lead glasses are now a staple in fluoroscopic procedures. Protective leaded eyewear is used by roughly **95% of physicians** and staff in the following vocations:

FRAME SIZING

THE BREAKDOWN

Example frame size: Centrist (55-17-140)*

In the above frame size, the 55 corresponds to "A" (Lens size), the 17 represents "B" (Bridge Size), and 140 is the length of "C" (Temple size). *"B" Size not specified. NOTE: Not all frame sizes are representative of how a frame will fit. It is always best practice to try a frame on when possible. For instance, the Nike Brazen is a "large frame" based on its frame size, yet it fits a majority of men and women's faces.

A

EYE SIZE

Horizontally measured from outermost edges of the lens. Approx 40-62mm.

B

BRIDGE SIZE

Measurement of the distance between two lenses usually measured at the nose bridge.

C

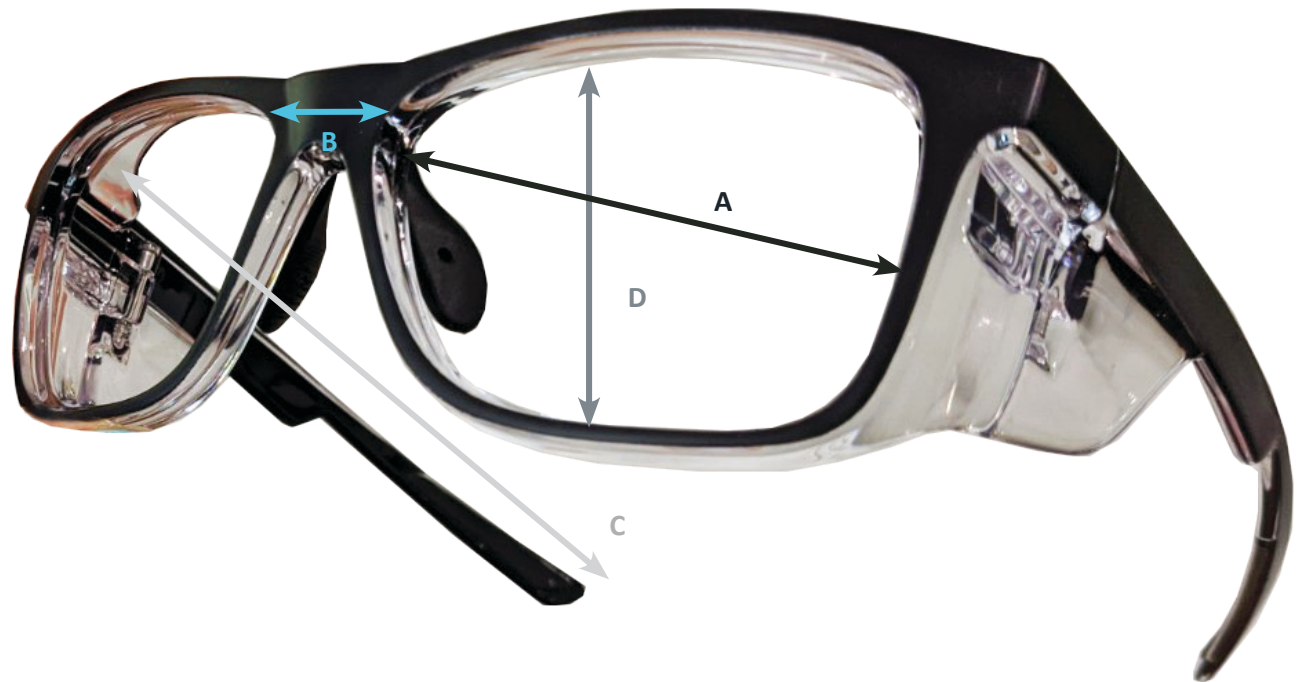

TEMPLE SIZE

Measurement of the temple arms that extend from the front of the frame over your ears. The length of your frame's temples is important to ensure stability and comfort.

D

"B" MEASUREMENT

Measurement of the height of the lenses. *For Bifocal and Progressive lenses, a B measurement of at least 25mm is recommended

YOUR PERFECT FRAME

WHAT TO LOOK FOR

TEMPLES

The length and curvature of your frame's temples is important to ensure stability and comfort.

TEMPLE GRIPS

Available with several eyewear styles, temple grips can provide comfort and stability for the wearer.

LEAD GLASS

Lead glass lenses provide the main protection against x-ray. The lenses greatly influence weight so it is important to balance maximizing coverage with the need for comfort.

SIDE SHIELDS

Side shields are essential for lateral protection. Some frames come standard with side shields and others are optional.

NOSE BRIDGE

A well-designed nose bridge is necessary for a proper fit. Flat nose bridges enable drilling for the addition of loupes.

VENTILATED NOSE PADS

Ventilated nose pads keep the frame comfortably gripped on your face and can reduce fogging.

EYEWEAR ADDONS

LATERAL SIDE SHIELDS

Many of our frames come with side shields for maximum protection. There are two types of side shields - glass and vinyl strips. **For both the vinyl strips and glass side shields, the standard protection is 0.50mm Pb.** Some frames are able to accommodate a 0.75mm Pb glass, such as the 53 Wrap shown here (Fig A.).

Fig A - Side shield example - 0.75mm Pb Glass

Side shield example - 0.50mm Pb strip

AR COATING

An anti-reflective coating eliminates the reflection produced by light on eyewear lenses. **Once an AR coat has been applied, 99.5% of available light will be able to pass through your lenses (compared to 85%) which enhances visual acuity and reduces eye strain.** During procedures, an anti-reflective coating is particularly important to reduce the reflections and light disturbances caused by operational and lighting equipment.
